

Climate Policy

FAGOR ELECTRÓNICA, S. COOP.

July-2024

1. Background and need

In a world that is increasingly aware of environmental challenges, businesses have a crucial role to play in mitigating climate change and protecting our planet.

In this context, Fagor Electrónica recognizes the urgency and importance of taking concrete steps to reduce our carbon footprint and promote sustainable business practices, and commits to implementing effective measures to reduce its greenhouse gas emissions, promote the efficient use of natural resources, and foster innovation in clean technologies.

In addition, we are committed to working with other stakeholders, including our employees, suppliers, customers, and the broader community, to move toward a more sustainable and climate-resilient future.

2. Our Commitments

Fagor Electrónica has set two emission reduction targets for 2032, in line with the Paris Agreement and the goal of limiting global warming to no more than 1.5°C:

- ***Scopes 1 and 2: Reduce our 2022 carbon footprint by 50% (in line with the targets set by the SBTi).***
- ***Scope 3: Reduce our Scope 3 carbon footprint by 15% from 2022 levels.***

In this way, we align our strategy with international standards and work to maximize our contribution to the **Sustainable Development Goals (SDGs)**.
