

New Silicon Carbide (SiC)
Package Formats Launched

Powering the next generation with Silicon Carbide innovation

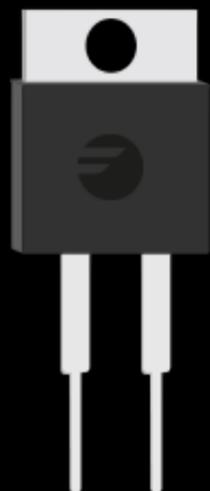

Higher power density, superior thermal behavior, smarter systems.

These solutions enable higher efficiency, greater power density, and improved thermal performance for demanding markets such as electrification, renewable energy, industrial power conversion, and e-mobility.

Advancing power semiconductor technology with Silicon Carbide.

These solutions enable higher efficiency, greater power density, and improved thermal performance for demanding markets such as electrification, renewable energy, industrial power conversion, and e-mobility.

Innovation made in Europe.

One of the few diode manufacturers in Europe and the only semiconductor manufacturer in Spain, reinforcing its commitment to innovation and sustainable power technologies.
